

GEORGIA DEPARTMENT OF PUBLIC HEALTH

Evaluation of Oral Health Prevention Services Outside Fixed Clinics (COVID-19 Impact Survey)

Covid19 has had a dramatic impact on everything in the country including oral health care. We realize there has been operational effects on direct clinical services, but also on preventive aspects such as basic screenings and oral health education. We know many of you all work in non traditional settings such as Head Start centers and local schools within your community. In an effort to try to get a sense of the current environment, gain insight on challenges/barriers, as well as possible innovative solutions, we have created a brief survey to better understand what local school infrastructure and operations looks like for this upcoming fall in your respective districts. Please take 5 minutes to fill out this brief survey as it will provide valuable information to continue to benefit Georgia's children. Thank you

* 1. What District do you represent?

2. Has COVID-19 impacted overall oral health prevention services performed outside of fixed clinics in your district?

Yes

No

3. If you answered YES to the above question, please describe how COVID-19 has impacted overall oral health prevention services performed outside of fixed clinics in your district.

4. If you have done school oral health prevention programs in your community in the past, what degree of impact do you foresee these changes creating?

5. List all strategies and approaches you have considered to make a positive impact on the oral health of school-aged children in your community as a means of adapting.
